

VCL Tutorial

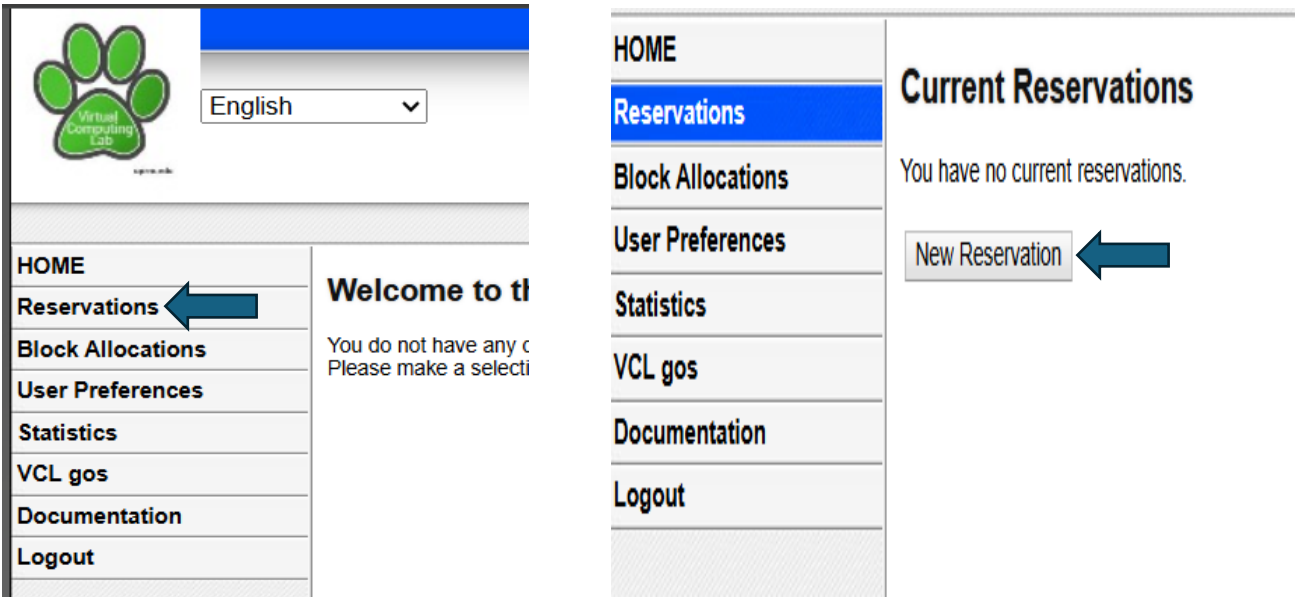

1. Go to <https://vcl.uprm.edu/index.php?mode=selectauth> and click on **Proceed to Login**.

2. Enter your UPR credentials then Login

3. Once you are logged in, you must select the option **RESERVATIONS**, then **NEW RESERVATION**

4. Please select, the environment you want to use (Ubuntu20LTS). When making a reservation, choose when you want to reserve (**Now** to reserve and use immediately, or **later** to schedule a reservation), and finally select how long you want the reservation for. After entering the reservation details, click on **CREATE RESERVATION**.

New Reservation

New Reservation

Please select the environment you want to use from the list:
Ubuntu20LTS

When would you like to use the environment?
☒ Now
☐ Later: Wednesday At 5 45 p.m.

Duration 1 hour
Estimated 30 minutes
45 minutes
1 hour
2 hours
4 hours

Create Reservation Cancel

Copyright © 2004-2026 VMware, Inc. All Rights Reserved.

5. Now you must wait for the reservation status to change from **“Pending”** to **“Connect”**, and then click on **Connect**.

Current Reservations

New Reservation

You currently have the following normal reservations:

	Environment	Starting	Ending	Initially requested
Pending... Est: 1 min remaining	Ubuntu20LTS	Wednesday, Mar 18, 2026, 4:40 pm	Wednesday, Mar 18, 2026, 5:45 pm	Wednesday, Mar 18, 2026, 4:40 pm

This page will automatically update every 20 seconds until the Pending... reservation is ready.

6. When you click on ‘connect’, this window will appear showing an IP address, a user ID, and a password. This information is crucial to be able to connect remotely via SSH

Connect

Connect to reservation using SSH for Linux & Unix

You will need to have an X server running on your local computer and use an ssh client to connect to the system. If you did not click on the **Connect!** button from the computer you will be using to access the VCL system, you will need to return to the **Current Reservations** page and click the **Connect!** button from a web browser running on the same computer from which you will be connecting to the VCL system. Otherwise, you may be denied access to the remote computer.

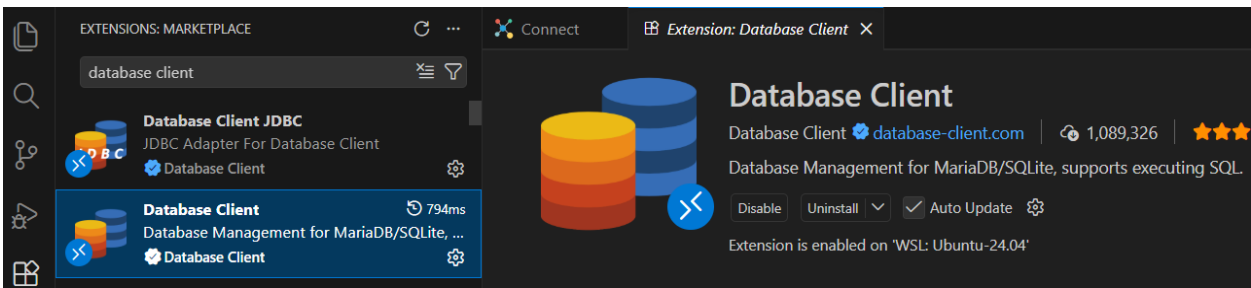

Use the following information when you are ready to connect:

- Remote Computer: 136.145.216.128
- User ID: omar.torres28
- Password: aYBuudFI

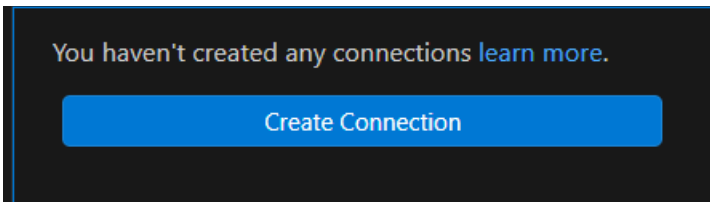

NOTE: The given password is for *this reservation only*. You will be given a different password for any other reservations.
NOTE: You cannot use the Windows Remote Desktop Connection to connect to this computer. You must use an ssh client.

Close

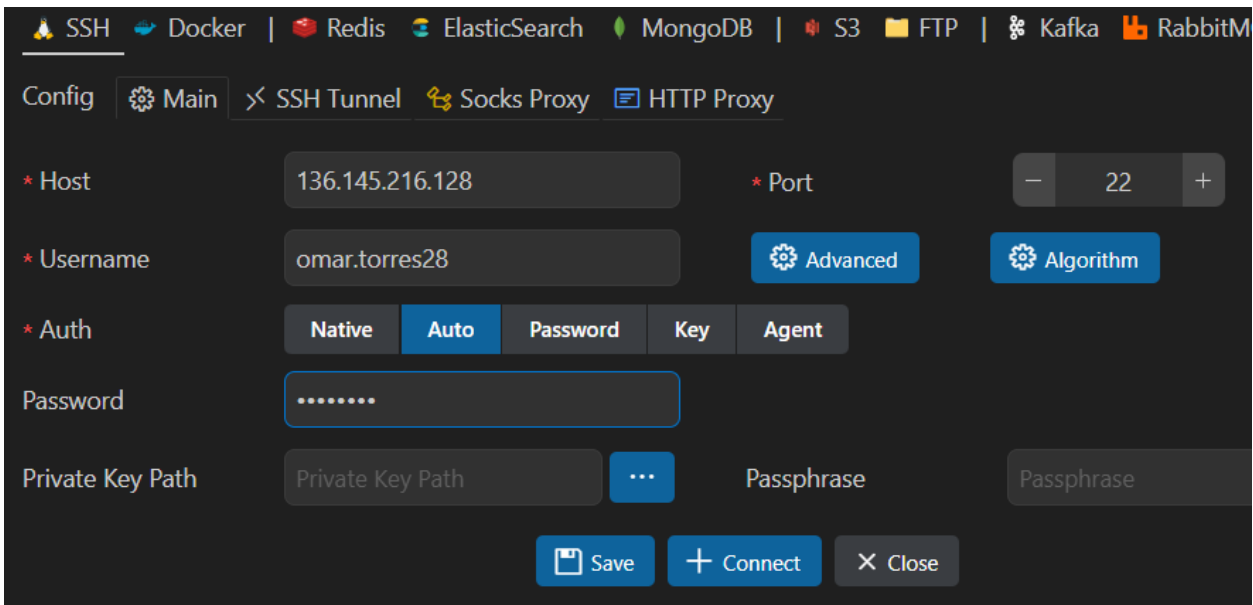

7. Open VSCode and search in the extensions for the one you prefer to connect via SSH. For example, I will be using ‘**Database Client**’.

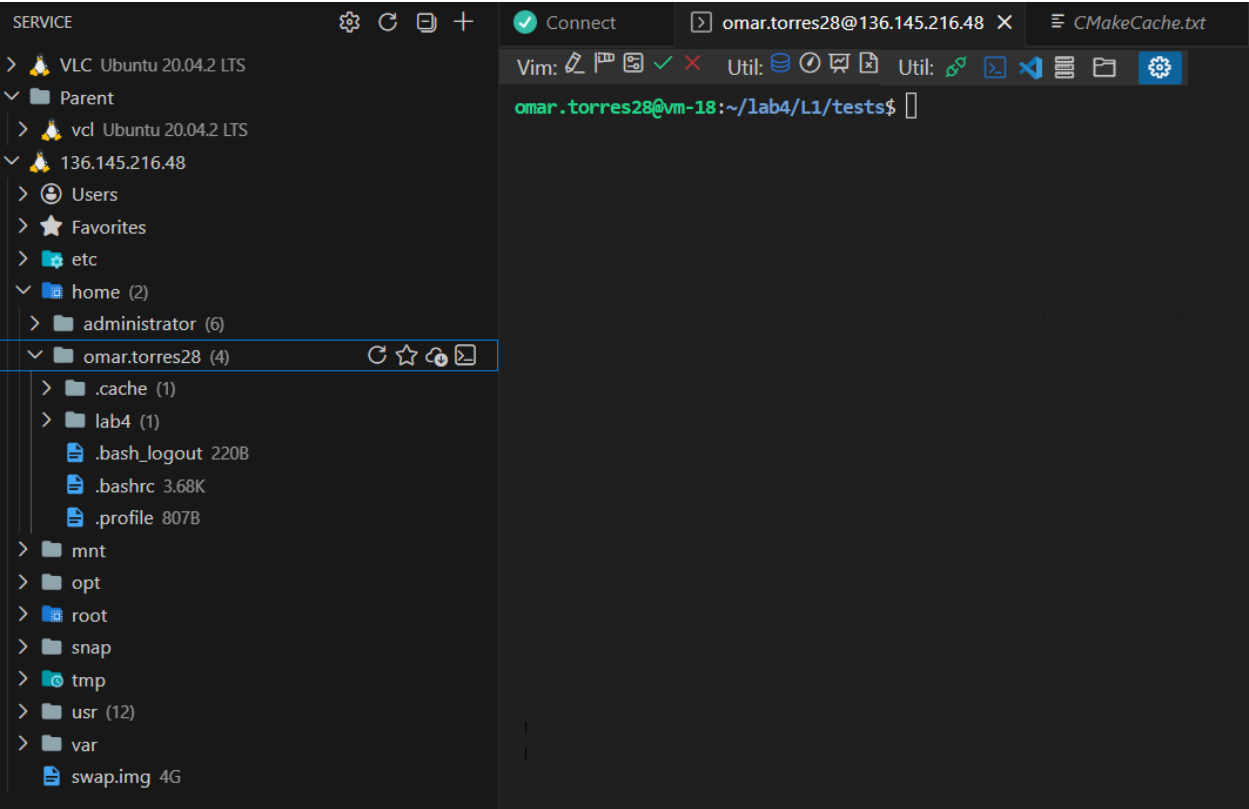

8. Once you have the extension installed, click on **Create Connection** and look for the **SSH** option

9. Enter the credentials generated in step 6 in the appropriate fields (leave the port as 22) and click **Connect**.

10. Once you're connected, your environment will be ready for you to start working on the exercises.

TIPS:

- Before starting the exercises, remember:
 - Update apt: *sudo apt update*
 - Install CMake: *sudo apt install cmake*
- Inside the folder where your user appears, you should drag and drop the folders where you will work on the exercises.
- Once you finish your exercises, remember to drag and drop them back to a local location on your PC.
